

INTRODUCING BIOBOND: BONDING CITIES FOR A BIO-DRIVEN AND SUSTAINABLE URBAN FUTURE

Project No: 101215653

We are pleased to introduce BioBOND - Bonding Cities for a Bio-Driven and Sustainable Urban Future, a European project implemented under the Citizens, Equality, Rights and Values (CERV) Programme, within the framework of the Town Twinning action.

BioBOND brings together European communities to explore how towns and cities can become greener, more resilient and more inclusive. Through cooperation, dialogue and the exchange of good practices, the project supports local communities in addressing shared environmental and social challenges.

What is BioBOND about?

BioBOND focuses on sustainable urban transformation and the future of public spaces. The project promotes ideas and practices that can help communities respond to climate change, protect biodiversity and create urban environments that are more accessible, inclusive and citizen-friendly.

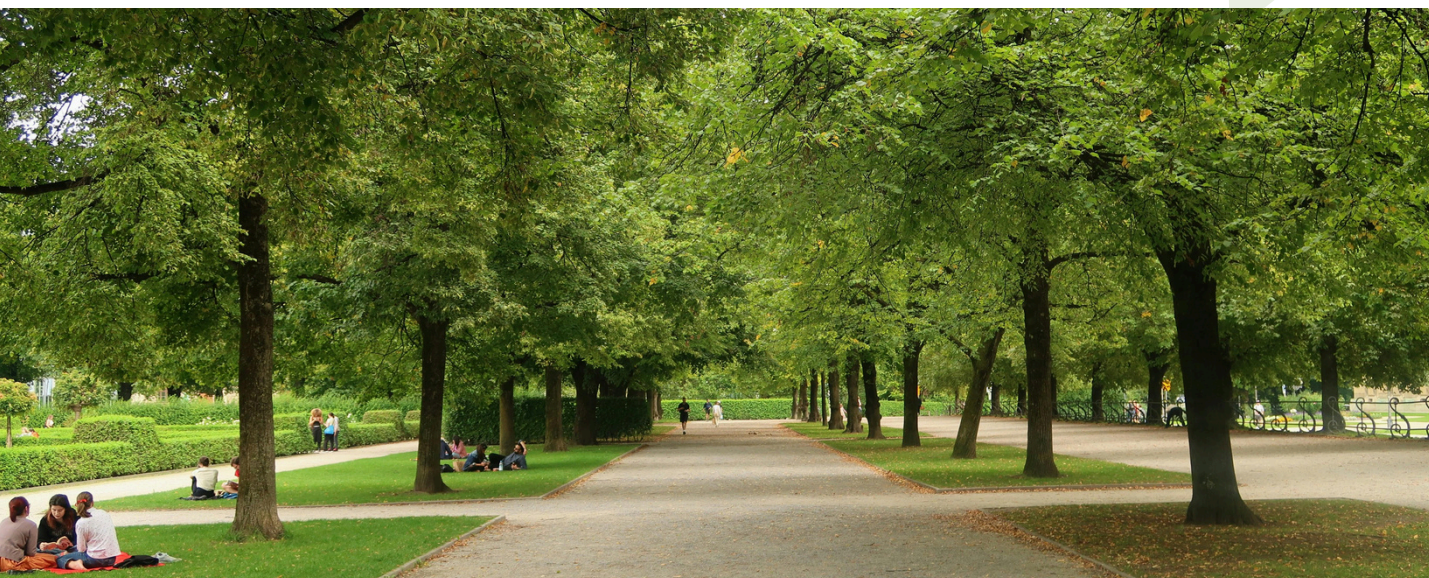

At the same time, BioBOND highlights the importance of active civic participation. Citizens, young people, women and underrepresented groups are encouraged to take part in discussions and decision-making processes related to urban sustainability and local development.

Why does it matter?

European towns face common challenges, from climate adaptation and limited green spaces to the need for stronger community engagement. BioBOND creates a space where municipalities, civil society organisations and citizens can exchange experiences and learn from one another.

The project is also connected with key European priorities, including the European Green Deal and the New European Bauhaus, linking local action with a broader European vision for sustainable and inclusive cities.

Looking Ahead

In the coming months, BioBOND will support knowledge exchange, cooperation between partner communities and activities focused on sustainable public spaces, inclusive governance and environmental action.

Stay tuned for more updates on the project, its partners, upcoming activities and results.
