

A EUROPEAN PARTNERSHIP FOR GREENER AND MORE RESILIENT CITIES

Project No: 101215653

BioBOND - Bonding Cities for a Bio-Driven and Sustainable Urban Future is built on the idea that towns and communities across Europe can learn from one another, exchange practical experiences and work together to address common environmental and social challenges.

The BioBOND Partnership

The BioBOND consortium brings together partners from Greece, Italy, Poland, Bulgaria and Serbia, creating a strong framework for transnational cooperation and mutual learning.

The project is coordinated by the Institute for Promotion and Certification of Agri-Food Products from Greece and implemented in cooperation with the Municipality of Alexandria, supporting the local dimension of the Town Twinning event.

The participating partner organisations are:

- Comune di Calimera - Italy
- Gmina Andrespol - Poland
- Petrich Municipality - Bulgaria
- Regionalna Razvojna Agencija Backa DOO Novi Sad - Serbia

Why This Partnership Matters

European towns face many similar challenges, including climate adaptation, urban greening, biodiversity protection and the need for stronger civic participation. However, each community also has its own experiences, needs and solutions.

Through BioBOND, partners have the opportunity to compare local realities, share good practices and explore how successful ideas can be adapted to different contexts. This exchange strengthens cooperation between municipalities, civil society organisations and citizens, while supporting a more connected European approach to sustainable urban transformation.

Local Action, European Vision

At the heart of the partnership is the belief that sustainable change begins at the local level. By connecting towns and communities across borders, BioBOND supports practical cooperation and encourages citizens to become active contributors to greener and more inclusive urban spaces.

The project also promotes a stronger sense of European identity by showing how communities from different countries can work together around shared values: sustainability, inclusion, participation and solidarity.

Next Steps

In the next phase of the project, the BioBOND partnership will continue preparing activities focused on sustainable public spaces, environmental awareness, inclusive governance and the exchange of good practices.

Stay tuned for more updates on the BioBOND partners, upcoming activities and the Town Twinning event in Greece.
